

22. In this regard, container 12 is movable upwardly and downwardly according to directional arrow [[24]] 23, Fig. 1 and may be fixed in the position shown in Fig. 1 or raised outwardly from body of water 22 as needed. Brackets 24 and 26 permit the fixation of container 12 at a predetermined position and extension into body of water 22, the purpose of which will be described hereinafter. Handles 29 and another not shown, permit [[he]] the user to lift container 12 outwardly from deck opening 18. A plurality of openings 28 at the lower portion of container 12 permits aqueous material, such as water from water body 22, to enter chamber 16 and fill the same to the level of the body of water 22. Multiplicity of directional arrows 30 from plurality of openings 28 indicate the movement of water into chamber 16.

Page 8, line 8.

Exit opening 42 of chamber 16 leads to a flexible conduit 44. Conduit 44 is intended to drain water and animal feed 40 from chamber 16. Conduit 44 leads to a pump 46 which directs water and animal feed mixture 48 via conduit 50 to a desired place. It should be noted that moveable baffle 32 directs animal feed mass 42 to a portion of chamber 16 which lies a selected distance from exit openings 42 in order to ensure thorough mixing of animal feed 40 and water.
